

FAQ Document

Getting Started

How do I create an account?

Head to the sign-up page, enter your details, verify your email, and you're in. The portal walks you through the first-time setup.

I forgot my password. What now?

Use the "Forgot Password" option on the login screen. You'll get a reset link by email.

Does my account work on both the portal and the app?

Yes. One login covers every platform.

Using the Product

Where do I find updates or new features?

Check the Updates section in your dashboard. The app also sends alerts when something important drops.

Why can't I access certain features?

A few options depend on your model, subscription level, or assigned permissions. If something feels off, your admin or dealer can confirm what's enabled for you.

Can I customize settings?

Most features have adjustable options under Preferences. You'll see all available toggles and modes based on your device.

Hardware and Installation

Who should install the accessory or module?

If you're comfortable with tools and follow the guide carefully, the basic installs are straightforward. For anything structural or wiring-heavy, let a dealer handle it.

My device isn't powering on. What should I check first?

Start with the battery, charging status, and cable fitment. If all of that is fine, a quick restart usually fixes temporary glitches.

Connectivity

Why is my device not syncing?

Usually it's one of three things: weak signal, outdated software, or a paused background sync. Refresh the connection from the settings page and try again.

Does it work offline?

Core functions do. Anything that needs cloud data or verification will resume when you reconnect.

Maintenance**How often should I service the unit?**

Routine checks every few months are enough for most users. The portal gives you reminders based on actual usage.

What's the best way to clean the device?

A soft cloth, mild cleaner, and patience. Avoid water entry points and anything abrasive.

Safety and Support**Where do I report a problem or defect?**

Use the Support tab. If it's urgent or related to safety, contact your dealer directly.

Is there a warranty?

Yes. Coverage varies by model and purchase region. The portal shows your exact warranty period.

Account and Data**How is my data stored?**

Everything is encrypted and handled under current security standards. You control what gets synced and what stays local.

Can I export my data?

Yes. You'll find the export option under Account Settings.
