

Feature Overview

This document highlights the key features of the portal, giving users a clear understanding of what the system offers and how each feature supports daily tasks.

1. Dashboard

The dashboard gives a quick snapshot of important information as soon as the user logs in. It shows recent activity, pending actions, quick links, and alerts that need attention. Everything is designed to help users move straight to what matters without navigating through multiple sections.

2. Search and Navigation

The portal includes a fast search function that helps users find manuals, bulletins, repair procedures, and service data instantly. The navigation menu is structured by category, keeping related information grouped together so users can move between pages effortlessly.

3. Document Library

The library stores all manuals, guides, bulletins, and reference documents in one place. Users can filter by category, model, or document type. Each file includes essential details like version number, release date, and a brief description to help users pick the right document quickly.

4. Vehicle Information Lookup

Users can search for specific vehicles using VIN or model details. This feature pulls up all relevant data including service history, technical specifications, recalls, and approved procedures. It ensures users are always working with accurate, model-specific information.

5. Service Procedures

Repair steps, maintenance instructions, diagnostic flows, and refinish processes are neatly organised for quick access. Each procedure includes clear steps, required tools, and safety notes so technicians can work confidently and consistently.

6. Technical Updates

The portal provides updates on software revisions, new repair methods, improved parts,

and system improvements. These updates help technicians stay current and ensure that all repairs meet the latest standards.

7. Warranty and Claims Tools

Users can view warranty terms, submit claims, track claim status, and access coverage details. The system keeps all submissions organised and provides guidance to reduce delays or rejections.

8. Communication and Alerts

Important messages, service bulletins, recalls, and critical notices appear directly in the user's alerts panel. This ensures no important information is missed and the workshop always operates with the latest instructions.

9. User Profile and Settings

Each user can manage account details, adjust preferences, and customise their workspace. Settings include language, notification preferences, and saved searches to streamline daily use.
