

Owner Portal Guide

1. Getting Started

Here's the thing — the portal is built to keep everything an owner needs in one place. The first time you log in, you'll land on a simple dashboard that gives you quick access to your product details, service history, warranty info, and updates.

Create your account using the email tied to your purchase. Once logged in, the system automatically pulls up your registered products, so you don't have to enter serial numbers every time.

2. Dashboard Layout

The dashboard keeps things straightforward. You'll see:

- Your registered products
- Upcoming maintenance reminders
- Notifications for software updates or service alerts
- Quick links for support, manuals, and troubleshooting

Think of it as your home base. Everything else branches out from here.

3. Managing Your Products

Open the product card to view details like model number, installation date, warranty status, and service logs.

You can upload receipts, add notes, or update ownership info if you transfer or reinstall the product.

There's also a history timeline showing all service interactions in clear chronological order.

4. Service and Support

If something isn't working right, go to the Support section.

You'll find step-by-step troubleshooting guides, request forms for technical help, and the option to book an in-person service visit.

The portal keeps a record of every request you've made, so you never lose track of conversations or scheduled visits.

5. Updates and Alerts

Whenever there's a new software version, feature enhancement, or important safety advisory, it appears in the Notifications tab.

You can check what the update includes, decide if you want to install it now or later, and track previous updates installed on your device.

6. Warranty and Documents

All your documents sit in one place — warranty certificates, purchase details, manuals, and past invoices.

You can download everything whenever you need it.

The portal also shows remaining warranty days and what is or isn't covered, so there's no guessing.

7. Profile and Settings

Here you control your personal details, preferred communication method, and notification preferences.

If you want reminders by email instead of SMS, or want only critical alerts, you can set that here.

8. When You Should Use the Portal

- To check maintenance schedules
- To download manuals
- To request service
- To check warranty validity
- To install software updates
- To review product health and alerts

In short, if it's related to your ownership, the portal is the easiest way to manage it.
