

Quick Setup Guide

Essential setup, operation basics, and how to navigate the portal

Getting Started

Introduction

This guide helps new users get up and running quickly. You'll learn the basic setup steps, how to access the main tools, and how to move around the portal with confidence.

System Requirements

Make sure your workstation meets the basics:

- Stable internet connection
- Modern web browser (Chrome, Edge, Firefox)
- PDF viewer
- Active portal credentials

If pages don't load correctly, start by clearing your browser cache or checking compatibility.

First-Time Login

1. Open the portal link in your browser.
2. Enter your username and the temporary password given by your admin.
3. Create a new password when prompted.
4. The system will take you to your dashboard after successful login.

If you forget your password later, use the Reset Password option on the login page.

Home Dashboard Overview

Once logged in, you'll see:

- A left-hand navigation menu
- A top bar with your profile, alerts, and quick settings
- Shortcut tiles for important modules

This dashboard is your main hub for everything inside the portal.

Basic Setup and User Preferences

Updating Your Profile

Before diving in, take a moment to adjust your profile settings:

- Display name
- Language (if available)
- Time zone
- Notification preferences

Small updates here make everyday use smoother.

Configuring Access Permissions

If you are an admin or supervisor, review user permissions:

- Assign roles such as Viewer, Editor, or Admin
- Enable module access for each role
- Review login history or activity logs

Non-admin users only see their allowed features.

Setting Up Shortcut Panels

You can pin frequently used tools or documents to your dashboard:

1. Open the module or item you want.
2. Select Add to Shortcuts or Pin to Dashboard.
3. Confirm the selection.

This is helpful if you refer to the same content repeatedly.

Notifications and Alerts

Choose how the portal communicates updates:

- Email alerts
- In-portal notifications
- Optional SMS (if enabled by your organisation)

You can change these settings anytime.

Navigation and Core Functions

Main Navigation Menu

The left-side menu contains the primary sections. Depending on your access level, you may see:

- Documents
- Technical Bulletins
- Diagnostics
- Repair Procedures
- Parts Information
- Admin Panel

Each section expands into detailed categories.

Searching for Information

Use the search bar to find documents by:

- Keyword
- VIN (if supported)
- Category
- Document type
- Publication date

Filters help you narrow down results quickly.

Opening and Reading Documents

When you open a document:

- It loads in the built-in viewer
- You can zoom, rotate, or download it
- Related documents appear on the right for quick reference

The goal is fast access with minimum navigation.

Breadcrumb Navigation

At the top of every page, breadcrumb links show your current location, for example:

Home > Documents > Electrical > Wiring Diagrams

Click any segment to jump back instantly.

Logging Out

Sign out using the option under your profile name on the top bar. This is especially important if you're on a shared workstation.
