

Safety Guidelines

Important Safety Information

Introduction

Purpose of These Guidelines

These guidelines give users a clear understanding of the safety rules to follow while using the portal and handling the technical information stored inside it. The aim is to reduce risk, avoid misuse, and ensure that everyone works with accurate and approved data.

Scope

These safety notes apply to all portal users, including technicians, engineers, supervisors, and administrators. The guidelines cover digital safety, data handling, and the safe use of technical documents during real-world operations.

Digital Safety

Account and Access Safety

- Keep your login credentials private.
- Never share your password or store it in unsecured locations.
- Always log out when using shared or public systems.
- Report suspicious login activity as soon as you notice it.

Secure Browsing

- Use only the official portal URL provided by your organisation.
- Avoid opening the portal in multiple browser tabs while performing critical tasks.
- Keep your browser up to date for security patches and stable performance.

Data Handling

- Do not download or store documents on personal devices unless authorised.
- Use documents only for the tasks they are intended for.
- Avoid editing or modifying downloaded documents unless you have publishing rights.
- When sharing information internally, verify the document version to prevent using outdated instructions.

Phishing Awareness

- Ignore emails requesting passwords or personal details.
 - If an email directs you to “update your portal settings,” verify the source first.
 - Never enter your credentials on unofficial or suspicious pages.
-

Safe Use of Technical Information

Using Repair and Diagnostic Procedures

The portal provides detailed repair, service, and diagnostic procedures.

When using these documents:

- Verify that you are using the latest version.
- Follow all steps in order; avoid skipping or improvising.
- Pay attention to safety warnings, highlighted notes, and torque values.
- Do not apply procedures intended for different models or variants.

Wiring Diagrams and Electrical Information

When working with electrical documents:

- Always disconnect the battery when required by the procedure.
- Confirm circuit and connector details before probing or testing.
- Use proper insulated tools.
- Never rely on memory; validate information against the latest diagram.

Parts Information

- Confirm part numbers before ordering.
 - Cross-check model year and variant.
 - Do not install parts unless they are officially recommended for the vehicle.
-

Workshop and Physical Safety

General Workshop Precautions

Even though the portal is digital, the information is often used for real-world work.

Keep these basics in mind:

- Wear appropriate PPE: gloves, goggles, and protective clothing.
- Use tools designed for the task, not improvised alternatives.
- Maintain a clean and organised workspace to avoid accidents.

Handling High-Voltage Systems

For hybrid or electric vehicles:

- Follow isolation procedures exactly as written.
- Use insulated HV gloves and approved test equipment.

- Never touch or remove HV components unless trained and authorised.
- Confirm HV system shutdown before beginning work.

Mechanical Safety

- Support vehicles on approved lifts or stands.
 - Do not work under a raised vehicle without secondary safety support.
 - Avoid placing tools on top of batteries, radiators, or engine covers.
-

Administrative Safety and Compliance

Document Control

- Only authorised users may upload, edit, or publish documents.
- Follow your organisation's internal review process before releasing content.
- Archive or retire outdated documents promptly to avoid confusion.

Audit Trail Awareness

The portal maintains logs of user activity.

Users should:

- Follow approved workflows
- Avoid bypassing checks or permissions
- Document corrections or updates clearly

Confidential Information

Technical publications may include proprietary data.

- Do not export or share content outside authorised channels.
 - Follow organisational rules for storage and encryption.
-

Emergency and Incident Reporting

Technical Issues

If you encounter problems such as missing documents, failed searches, or unexpected behaviour:

- Take a screenshot if possible
- Report it to the helpdesk or admin team
- Avoid making unauthorised fixes or configuration changes

Safety Incidents

If incorrect technical information leads to a risk or near-miss:

- Notify your supervisor immediately

- Provide details of the document used
- Record the vehicle model, task, and time

This helps quality teams identify and correct the issue.

Final Notes

Staying Up to Date

The portal may receive updates, new features, or revised content.

- Check notifications regularly
- Review updated documents before starting important tasks
- Attend training sessions when offered

Responsibility

Every user is responsible for following these guidelines. Safe practices protect not only you but also your colleagues, customers, and the equipment you work with.
