

Troubleshooting Guide

This guide helps identify and resolve common issues quickly. Each section highlights symptoms, likely causes, and practical steps you can take before requesting service.

1. System Not Loading

Symptoms: Slow startup, blank screen, or no response.

Possible Causes: Low battery, corrupted files, or unstable connection.

What to Do:

- Restart the system and disconnect any unnecessary accessories.
 - Check power source or battery charge.
 - Ensure your network connection is active.
 - If the issue repeats, run a basic diagnostic or contact support.
-

2. Features Not Responding

Symptoms: Buttons, menus, or navigation paths stop working.

Possible Causes: Software glitch, outdated version, or incomplete installation.

What to Do:

- Close and reopen the feature.
 - Log out and back into the portal or device.
 - Confirm you have the latest software version installed.
-

3. Performance Slowness

Symptoms: Lag, delayed actions, or freezing during use.

Possible Causes: Low memory, background tasks, or old cache files.

What to Do:

- Clear temporary files and browser cache.
 - Close unnecessary apps or browser tabs.
 - Restart the system to free up memory.
-

4. Connectivity Issues

Symptoms: Pages not loading, failed sync, or frequent disconnections.

Possible Causes: Weak network, incorrect settings, or server maintenance.

What to Do:

- Check Wi-Fi or data strength.
 - Reset the router if possible.
 - Verify your login credentials and permissions.
-

5. Display or Visual Errors

Symptoms: Missing icons, distorted graphics, or misaligned content.

Possible Causes: Browser incompatibility or corrupted visual data.

What to Do:

- Refresh the page.
 - Switch to a supported browser.
 - Update display drivers if using a local system.
-

6. Upload or Download Failures

Symptoms: Files stuck, errors during transfer, or incomplete downloads.

Possible Causes: File size limits, unstable connection, or unsupported formats.

What to Do:

- Check file size and format requirements.
 - Try uploading/downloading again after restarting the session.
 - If the issue persists, contact support with the file details.
-

7. When to Escalate

- The same issue repeats after multiple attempts to fix it.
- You notice unusual sounds, smells, overheating, or physical signs of failure.
- System errors affect your ability to work or operate essential functions.
- Provide screenshots, error messages, and timestamps when reporting.
